

Net Zero by 2040: another commitment that BRF puts into practice

We believe that a better future goes far beyond offering quality food. And when it comes to sustainability, we redouble our attention to the environment.

That's why we've taken another fundamental step in our ESG agenda:
to be NET ZERO by 2040.

We've joined the Science Based Targets (SBTi), a global initiative aimed at efforts to limit global warming. This is our contribution to minimizing the impacts caused by climate change and making the world a better place to live.

Companies that commit to the Science Based Targets initiative which they can choose two paths: 1) reduction or 2) reduction + neutralization.

Why did BRF choose the second option?

We chose option 2) Reduction + neutralization of residual emissions (net zero), because we understand that only reducing emissions is not enough to limit the increase in the planet's temperature and this option is more in line with the Company's purpose.

We reinforce that we have a clear role to play in protecting our climate and ensure that the transition to a low-carbon economy is a prosperous one.

There will be four priority fronts: increased use of renewable energy, sustainable purchases of grain, low-carbon agriculture and operational efficiency.

SUSTAINABLE GRAIN PURCHASES

- Guidelines for deforestation free chain
- Tracking of 100% of the grains acquired from the Amazon and the Cerrado until 2025.

LOW CARBON AGRICULTURE

- Scale up the use of solar energy in our integrated systems.

RENEWABLE ENERGY

- Wind and solar sources.
- +50% energy from clean sources by 2030.

OPERATIONAL EFFICIENCY

- New effluent and waste treatment technologies Sustainable Distribution Centers.
- Logistic efficiency and alternative fuels.

Get to know some of our initiatives:

Grain Purchase Policy which reinforces our goal of having a more sustainable chain.

Wind and solar sources +50% energy from clean sources by 2030.

The Company started to implement tests with electric cars in its commercial fleet, which significantly reduces the emission of greenhouse gases.

First Brazilian company, in partnership with Aleph Farms, to develop cultured meat by 2024, which contributes to the production of more sustainable food and expands the range of choices for consumers.

Commercial partnership with Pontoon for the construction of a solar energy park in the cities of Mauriti and Milagres, in Ceará and a joint venture with AES Brasil for the self-production of wind energy. The contributions total about R\$130 million in clean energy. With BRF's current clean energy portfolio and partnerships, the company will reach 88% of electricity from clean and renewable sources in Brazil.

Carbon Neutral Product

Innovation and sustainability have great synergy to find new solutions for big challenges. From this combination, still in 2021, BRF launches the Veg&Frango (Chicken), **Sadia Veg&Tal**, carbon neutral product line.

With the new goals, we reinforce our commitment to the ESG agenda, showing that it is possible to follow the 2030 Vision, the Company's growth strategy, and at the same time, ensure that our actions are carried out in a responsible, innovative way that positively impact the environment, the production chain and the communities in which we operate.
